## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Group I, Claims 4-6 in the reply filed on 9-6-06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 7-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claim 4** is rejected under 35 U.S.C. 102(b) as being anticipated by Chung (US4082180).

Chung teaches a motorized roller comprising: a roller body **20,30** of the motorized roller; a motor **46** disposed inside the roller body **20,30**; a reducer **40** which is disposed inside the roller body **20,30**, and reduces the rotation of the motor **46**; and a rotor **112** which is disposed inside the roller body **20,30**, and connected with the reducer **40** and the roller body **20,30** to transmit power of the reducer **40** to the roller body **20,30**; wherein the roller body **20,30**

Art Unit: 3726

comprises a first roller body **20** and a second roller body **30**, and the first roller body **20** and the second roller body **30** is connected at a power transmission section (above reference numeral **32** in figure 2) between the rotor **112** and the roller body **20,30**. See mark-up of figure 2 below for what is considered a “power transmission section”, similar to figure 3(A) of the instant invention where reference character “x” defines a “power transmission section”.

5. **Claims 4-5** are rejected under 35 U.S.C. 102(b) as being anticipated by Fannin et al. (US6447336).

Fannin et al. teach a motor **82**, reducer **84**, a rotor **89**, wherein the roller body comprises a first roller body **104** and a second roller body **88** connected at a power transmission section between the rotor and the roller body.

The inner peripheral surfaces of the first roller body **88** and the second roller body **88** are connected to an outer peripheral surface of the rotor **89**.

***Allowable Subject Matter***

6. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
